Outcomes Standards

The MND Association aims to improve care and support for people living with motor neurone disease (MND) and their families. We want to ensure all people with MND receive the right care, in the right place, at the right time.

We’ve designed a set of Outcomes Standards that represent what good care looks like for people living with MND.

The Outcomes Standards:
• provide a focus for action and improvement across the health and social care system for people living with MND
• express aims and objectives for the health and care of people with MND in a similar way to models used in the health and social care sectors
• help the MND Association to monitor progress towards ensuring the best care for people living with MND, their families and carers.
