Motor neurone disease (MND) is a progressive neurological condition that can cause, among other symptoms, muscle wasting and fatigue. This can lead to mobility problems, including difficulty walking. As the condition progresses, most people with MND will need to use a wheelchair. It is important that a person with MND has access to a seating assessment and a suitable wheelchair as early as possible.

This information is for health and social care professionals who would like to know how someone with MND can access a suitable wheelchair.

If you have any questions or experience any problems with access to a wheelchair for a person with MND, our helpline may be able to offer advice. Email wheelchairqueries@mndassociation.org or call 0808 802 6262.

Access to wheelchairs
In England, Scotland and Wales referral to the local wheelchair service is provided by the NHS, and in Northern Ireland by Health and Social Care Northern Ireland (HSCNI). Referrals should be made by a GP or a healthcare professional, in line with local policy. An assessment will then determine whether or not the person with MND requires a wheelchair and, if they do, the most appropriate wheelchair for their needs.

Timing your referral
Refer people to wheelchair services without delay if needed. Wheelchair needs should be assessed and a manual and/or powered wheelchair that meets the person’s needs should be provided without delay.

- The NICE Guideline on the Management of MND

Provision from statutory services can take several weeks. Because MND is a rapidly progressive condition a timely referral to wheelchair services is critical. Someone with MND should be referred as soon as they are starting to experience mobility problems and are willing to accept the need for a wheelchair. Statutory funded wheelchair services can be accessed by anyone with long term mobility problems (adult or child) and many services will prioritise people with MND.
In England assessments are offered by the NHS through approximately 150 wheelchair services, individually commissioned by their respective Integrated Care Boards (ICBs). Searching on the internet using the client’s address and GP will direct you to the appropriate NHS Wheelchair Service with their respective referral forms and processes.

In Northern Ireland assessments are carried out through the Department of Health, Social Services and Public Safety (DHSSPS) Wheelchair Service. Find more information at www.nidirect.gov.uk/articles/equipment-people-disabilities

In Wales assessments are offered by the Artificial Limb and Appliance Service via two Artificial Limb and Appliance Centres. Visit https://cavuhb.nhs.wales/our-services/artificial-limb-and-appliance-service/wheelchair-service/

**Assessments for a wheelchair**

Once someone has been referred to wheelchair services the request will be triaged to determine the priority for an assessment. The assessment will cover the person’s postural and mobility needs, and their level of function. It will consider the person’s home and the local environment where the wheelchair is to be used. It should also consider how the wheelchair is to be transported and how the user’s needs may change. It may also include an eye test.

A wheelchair assessment should also take account of whether there is someone available (for example a carer) to push a wheelchair and load it into a car if needed and, if so, whether that person is physically able to do this.

If an unpaid carer has a medical need of their own, or there is no carer in place at all (paid or unpaid), options may include providing the chair with an attendant control at point of issue, or for manual chairs the addition of a power pack. Not all statutory services will fund these items and additional funding from alternative sources may need to be found (see Wheelchair funding, below).

Wheelchair services vary across the country which results in local differences in referral processes and eligibility criteria. Because of these differences, the type of wheelchair a service can provide at a given time can vary. NHS England is working with the National Wheelchair Leadership Alliance to identify and address this.

**Wheelchair funding**

Some people choose not to wait for a wheelchair to be provided by statutory services. Others do not realise they may be eligible for wheelchair provision. This can lead to an inappropriate wheelchair being purchased privately without an assessment from an appropriate healthcare professional. Timely referral to wheelchair services is therefore critical.

Since 2019, ICBs in England have been expected to introduce personal wheelchair budgets (PWBs) to replace the wheelchair voucher system. The aim is to provide the wheelchair user with greater flexibility and choice of wheelchair or accessory. They can choose to select the standard NHS provision, go for top up options to the standard wheelchair or choose an alternative wheelchair outside the standard range by funding the difference themselves or with help from a third party, such as the MND Association.

More information can be found at www.england.nhs.uk/personal-wheelchair-budgets

An assessment of clinical need is still carried out and a wheelchair prescription agreed for those who access a personal wheelchair budget. It is important for the wheelchair therapist to discuss all the options with the person with MND, as some arrangements can involve them being responsible for maintenance and insurance costs. It is important to consider who will review the person’s mobility and wheelchair provision as MND progresses and the person’s needs change.

Some services may not be able to provide certain types of wheelchair, or certain types of wheelchair equipment (controls etc) due to local commissioning criteria. In such cases, alternative funding may need to be sought. MND Connect may be able to help or signpost you to other services. Call 0808 802 6262 or email mndconnect@mndassociation.org. Specific queries relating to wheelchairs, mobility and the grants that can be accessed, can be directed to wheelchairqueries@mndassociation.org
Receiving the wheelchair
A wheelchair may be issued from the stock available at the wheelchair service. Alternatively, it may need to be ordered from a supplier. Procurement processes vary and in some cases specific funding must be secured before an order is placed.

Once received from the supplier, the wheelchair will be adjusted to suit the individual and then the person with MND will be shown how to use it. For powered wheelchairs, they should also be given information about insurance and an outdoor safety test may be completed.

Waiting times for wheelchairs will depend on whether the chair is a standard order or specially configured. In the case of a powered wheelchair, the Wheelchair Service team will aim to provide a powered wheelchair that will meet the current needs of the person for postural support and comfort and have the potential for modification to the seating and drive system as the person’s condition changes.

Maintenance and repairs
All wheelchairs provided by statutory wheelchair services will be serviced and maintained as part of the provision. Arrangements may be different for equipment purchased with PWBs. In this case the person with MND should be told who to contact if there is a problem with the wheelchair or an accessory.

Reviewing needs
If a wheelchair no longer meets their needs, the person with MND can self-refer back to the wheelchair service for a reassessment. It is important to maintain this link with the wheelchair service so changes to provision can be made in a timely manner. This may include modifications to the existing chair or a change of chair to one that is more appropriate to the client’s needs.

Specialist MND wheelchair services
The MND Association funds two part time specialist wheelchair therapists and one full time wheelchair service co-ordinator to support wheelchair provision nationally.

The specialist therapists are able to provide advice and support to wheelchair services and Community Teams, through training, joint assessments and advice to find the right wheelchair solutions for people with MND. Assessments can be carried out virtually where it would not be possible to meet up in person.

The wheelchair service co-ordinator offers information, advice, advocacy and wheelchair-related support grants. Enquiries are accepted from individuals, community therapists and wheelchair services by email and can help the person with MND address any problems they may be experiencing in accessing a specialist assessment or obtaining an appropriate wheelchair. Email wheelchairqueries@mndassociation.org. MND Connect may also be able to help or signpost you to other services. Call 0808 802 6262 or email mndconnect@mndassociation.org

Types of wheelchair for people with MND
Each person will be assessed for the type of wheelchair they need. Some people may be assessed as needing more than one type.

A wheelchair for someone with MND should meet their current and future needs as the condition progresses. This will usually mean selecting a high specification wheelchair with a range of functions and postural supports. Initially some of these functions and supports may not be fully used, but over the course of disease progression they often become essential for the continued use of the wheelchair.

Ordering a chair in this way, in advance of actual need, is usually a more cost effective and efficient use of resources as well as being better for the person with MND.

Manual wheelchairs
There are two types of manual wheelchair that are used to meet the needs of people with MND when they are beginning to have mobility problems. One is a folding, portable wheelchair, with self-propelling or attendant wheels, and the other offers more support with a tilt-in-space mechanism.
• **A folding, portable wheelchair** - these can be useful and convenient when someone is starting to need help with their mobility. This type of chair is often easy to use and can be folded up to transport in a car boot. It is essential that the wheelchair provides adequate postural support.

• **A highly supportive wheelchair with tilt-in-space and reclining mechanism** - where a powered wheelchair is neither wanted nor appropriate, these chairs are most often used by those who need more postural support than can be offered by a standard wheelchair. The tilt-in-space mechanism can tilt the whole seat backwards, helping to manage the effect of gravity on an individual’s posture. It can also relieve pressure on vulnerable areas, helping with positional change and easing the effects of fatigue. These wheelchairs are larger than standard manual wheelchairs, and will not fold into a car boot.

**Powered wheelchairs**

These wheelchairs provide the user with more independent mobility if they are unable to self-propel a manual wheelchair. They are usually driven using a hand-operated joystick controller but a wheelchair therapist or rehabilitation engineer will assess for the most suitable control system based on the person’s level of functional ability. A powered wheelchair may also include a powered tilt-in-space and recline mechanism.

There are many different types of powered wheelchairs, which may be suitable for indoor only, indoor/outdoor and outdoor only. There is an increasing selection of lighter folding powered wheelchairs that are designed to be lifted into the boot of a car. These chairs are not provided by the NHS, but may be an option in the early stages of the disease to enable the person with MND continue to use a car for transport.

The NHS will only provide indoor only or indoor/outdoor wheelchairs. As long as the home environment can accommodate larger equipment, the MND Association advocates Electrically Powered Indoor Outdoor Chairs (EPIOC) for people with MND, as they have more scope to be effective in the future.

It is not always possible to lift a powered wheelchair into a car due to its weight and size, but a boot hoist might be an option if an existing car is big enough. This will still involve a transfer into a car seat. A wheelchair accessible vehicle (WAV) is another option. Our booklet for people with MND, *Getting around* gives more information. Download at [www.mndassociation.org/publications](http://www.mndassociation.org/publications) or order from MND Connect. Call 0808 802 6262 or email [mndconnect@mndassociation.org](mailto:mndconnect@mndassociation.org)

Useful features to include are:

- powered tilt-in-space
- powered recline
- a cushioned, tension-adjustable backrest to accommodate an upper kyphosis (rounded upper back)
- a seatboard that can be supplied with the most appropriate pressure-relieving cushion
- different headrest options that can be adjusted to suit as the condition progresses
- padded armrests
- independent angle-adjustable foot rests
- controls that can be reprogrammed as needs change, and allow for additional switches/controls to be added
- other additional features which may fall outside of NHS provision, including powered elevating leg rests and seat riser.

**MND Wheelchair Pathway**

The *MND Wheelchair Pathway* focuses on the provision of wheelchairs in a timely way and to a specification to meet the users ongoing needs. It has been developed to support wheelchair services to provide a timely, effective service to people with MND. The first page outlines the ideal pathway for wheelchair provision. The second page includes space to record timescales between each activity for audit purposes, followed by suggestions to aid reflection on your current practice and service delivery.

The pathway is included on the following two pages. Additional copies can be downloaded at [www.mndassociation.org/publications](http://www.mndassociation.org/publications) or ordered from MND Connect. Call 0808 802 6262 or email [mndconnect@mndassociation.org](mailto:mndconnect@mndassociation.org)
Wheelchair Pathway for MND

This may be identified by a HSCP or the person with MND. Initial referrals to be made by HSCP.

Consider documentation and education resources to support handover e.g. manuals, YouTube links, manufacturers’ websites, contact details of therapist, WCS and servicing/repair contact details.

Identify as a priority order through own procurement process and manufacturer.

Change in function and/or mobility identified

Review

Referral

Triage

Issue and handover equipment

Order equipment

Specialist assessment

As part of the referral process, consider referral to the local authority/social services so they can assess the person’s home and determine if there is a potential need/need for them to provide a ramp/door widening/other adaptations to support wheelchair provision.

Wheelchair service triage to establish the priority - this can either be virtual or in person.

Carried out by a wheelchair therapist. Support can be provided by MND wheelchair therapist as needed. Consider use of virtual assessments. Include a holistic assessment of physical and lifestyle needs. Discuss:
- access to work and education
- current and future transport needs such as boot hoists, wheelchair accessible vehicle, Motability
- equipment and additional features that might be required (e.g. powerpack, risers, attendant controls, elevated leg rests, switches)
- funding options (PWB) and where to apply for top ups e.g. via MND Association, Access to Work and other charities
- maintenance of wheelchairs and any additional features.

Key terms
- MND: Motor neurone disease
- PWB: Personal wheelchair budget
- WCS: Wheelchair services
- HSCP: Health and social care professional
Audit tool

This pathway includes space to record timescales between each activity. This is followed by suggestions to aid reflection on your current practice and service delivery.

Referral
How are referrals made to your service?
How can referrals and re-referrals for clients with MND be made quickly and marked as a priority?
Do you have a secure email address for referrals or re-referrals?

Triage
How do you prioritise or fast track MND referrals?
Are there links with the MND care centre, MND community team, and social care occupational therapist to support the pathway?
Can you gain more information about the person, eg:
- When were they diagnosed?
- What type of MND do they have? How fast is it progressing?
- What is their current level of function? The ALS Functional Rating Scale1 can help predict postural/wheelchair needs.
- Are they known to other health care professionals such as a multidisciplinary team or social care occupational therapist?
- What is hand function like? Consider head, leg and foot control.
- What is their current method of transfer?

Specialist assessment
Would having a clinician with a specialist interest in MND streamline your processes for this client group?
Is there a training need for the team on MND and its impact?
Can regular assessment slots for specialist controls, complex equipment trial etc be accessed in a timely manner?
Do you consider future-proofing of the chair for the changing postural and functional needs of the client?
Will the client require devices mounted to their chair either now or in the future? Eg communication aid, ventilation, feed pump.
Are you able to signpost individuals to transportation and adapted vehicle information?
Visit www.nice.org.uk/guidance/NG42 (see section 1.9).

Order equipment
Is there an accessible stock of equipment that is suitable for MND clients that could be issued on assessment?
Are you using codes from manufacturers to indicate an order is for MND? They may be able to fast track orders.
Is there a central procurement process? Is there a fast track through this?
Can you use funding from a third party for additional features?
Can you utilise PWB to provide equipment to meet holistic needs? Is there a process in place to make usage of PWB easy and efficiently?
Is there a checking process for urgent or MND orders to ensure they progress in a timely way?

Issue and handover equipment
Do you have regular time slots allocated for urgent or MND cases, so timely appointments can be booked?
Are clients allocated the same wheelchair service therapist to ensure continuity of care?
Is a process in place to ensure all technical changes or alterations can be made before or during issue of equipment?

Regular review
Do you have a regular review service or allocated time slots?
Do you email or call clients for updates?
Do clients have a named person they can contact if they need further support?
Can review requests be taken on without need for re referral process once a person has a product from your service?
