

GENETICS AND MND

In around **10% of cases** of motor neurone disease, there is a family history of the disease.

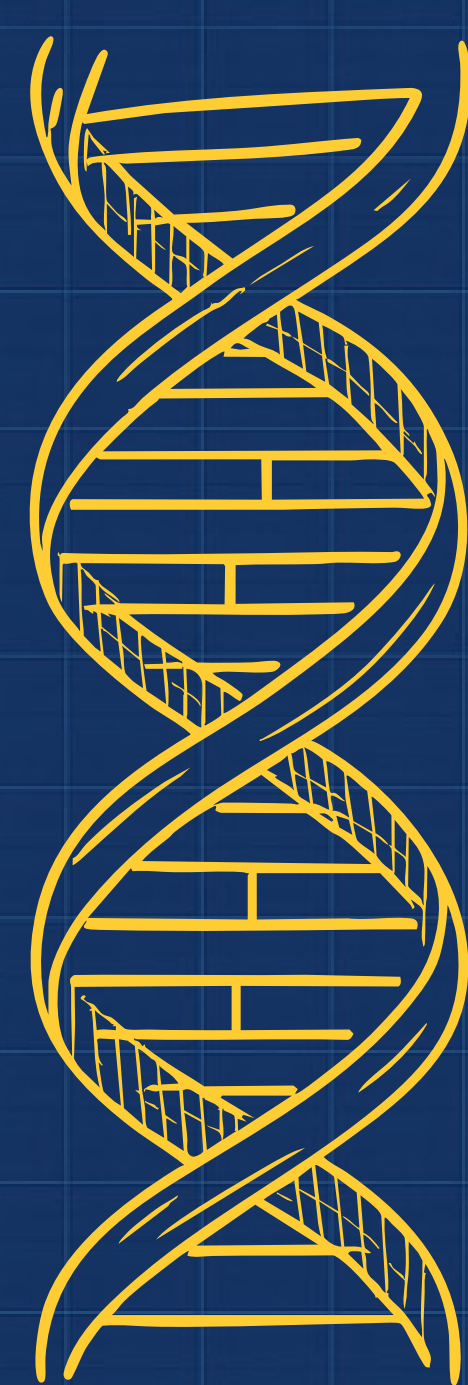

In inherited MND, **changes in genes** are passed down through families and increase the **risk of developing** the disease.

Over **40 genes** have been linked to the development of motor neurone disease.
The most common are:

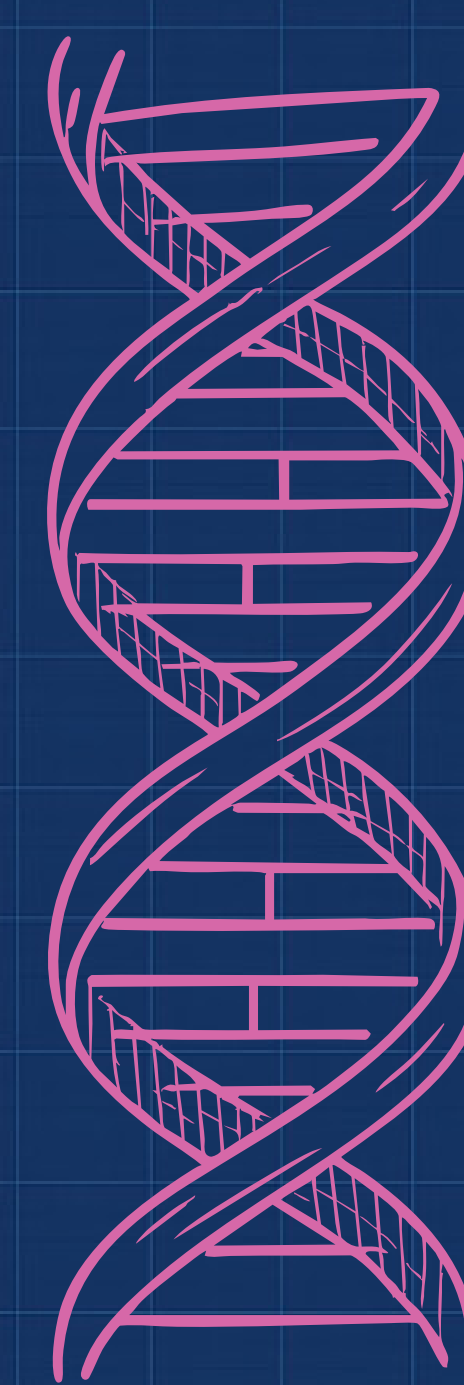

C9orf72

SOD1

TARDBP

FUS

“ **PERFORM GENETIC SEQUENCING**

Make a Lego gene and test it for
changes linked to MND
