

Every penny you raise matters.

Every day we support people affected by Motor Neurone Disease (MND), campaign for better care and fund ground-breaking research. Because with MND, every day matters.

The difference you could make	£12 could provide a pack of information to help guide and support a person who's just been told they have MND through the first few days and weeks.	£35 could fund one of our MND Connect advisers for an hour, to give people affected by MND the information and support they need.	£100 could help a person with MND read to their children even when their voice is beginning to fail, by providing a voice amplifier.	£250 could power a month's cutting-edge MND research into a cure by paying for the day-to-day consumables needed in a laboratory, such as plastic ware and gloves.
£600 could fund eight sessions of counselling for a child learning to cope when a loved one is affected by MND.	£800 could help 80 carers feel better informed and supported by being given printed copies of our guide 'Caring and MND: support for you'.	£1,500 could help a person with MND sleep in their own bedroom for six months more, by funding the installation and rental of a stairlift.	£2,500 could fund cutting-edge research into changes in DNA in 60 blood and tissue samples from people with MND.	£5,000 could help unlock ground-breaking discoveries by covering the costs of advanced data-processing and storage for important research projects for one year.
