

11C

Equipment and wheelchairs

Information for people with or affected by motor neurone disease

With MND, you may experience problems with movement and strength in your arms, hands and legs. This can make everyday tasks difficult. Equipment to prolong independence can improve your quality of life.

This information sheet looks at ways to make daily life easier by using a range of equipment, including wheelchairs, and how to access this support.

Always get individual advice from your occupational therapist to ensure that equipment or installations are right for you.

The information is split into the following sections:

- 1: Do I need to use equipment?**
- 2: What types of equipment can help with MND?**
- 3: Where do I get equipment from?**
- 4: How do I access a wheelchair?**
- 5: How do I find out more?**

 This symbol is used to highlight **our other publications**. To find out how to access these, see *Further information* at the end of this sheet.

 This symbol is used to highlight **quotes** from other people with or affected by MND.

The MND Association has been certified as a producer of reliable health and social care information.

www.england.nhs.uk/tis

1: Do I need to use equipment?

At first, you may not require any support with MND. As your symptoms progress, you may find new ways of doing things, but in time you will need more help.

Accepting you have to find new ways of doing things can be difficult for you and those close to you. However, equipment designed to assist with disability can help you remain independent for longer. It can also help you and your carer to save energy for activities you really want or need to do.

“The ability to adapt and change can make such a difference to the experience of living with MND.”

The impact of MND on your mobility and independence can be frustrating and upsetting, but support can make these changes feel easier. Ask your GP or another member of your health and social care team for advice.

For more information about coping with the emotional impact of MND, see: Information sheet 9C - *Managing emotions*

What if I'm just tired?

With MND, you may feel tired if:

- your muscles have weakened and it takes more effort to complete everyday tasks
- your breathing is affected and this causes fatigue
- you are finding it more difficult to eat and drink the amounts you need.

For more information about breathing with MND, see: Information sheets 8A to 8E

For more information about swallowing with MND, see: Information sheet 7A – *Swallowing difficulties*

It may help to ask your GP for a referral to the following specialists:

- a respiratory team if you think your breathing is affected
- a speech and language therapist and a dietitian if your swallowing is affected.

Equipment can also help with fatigue, particularly if doing things seems to take longer. If you can find ways to do tasks more easily, you can save energy.

It can help to think about energy like a 'bank account'. If you overspend one day, you may feel extremely tired the next. Plan what you really want or need to do first. Delay or get help with other tasks as needed.

Try to:

- listen to your body and pace yourself
- prioritise tasks, manage your time and be flexible with routines
- ask your physiotherapist, occupational therapist and dietitian about ways to manage your fatigue
- plan a rest day before and after a particularly busy time, such as a family event
- carry out tasks while sitting and take frequent breaks
- organise your home so that important items are close at hand.

"I prefer to think of fatigue in terms of my batteries running low and needing to recharge them".

For more information about fatigue and MND, see:
Information sheet 11D – Managing fatigue

2: What types of equipment can help with MND?

The following overview looks at the types of equipment support that may help with MND, depending on your symptoms. See also section 3: *Where do I get equipment from?*

Difficulty	Examples of equipment or aids that may help
<i>Getting around</i>	<ul style="list-style-type: none">• splints and braces to support vulnerable joints• walking stick, grab rails and walking frame or rollator to help support balance and walking• wheelchairs to help with mobility or if you find it difficult to walk far without getting tired. See section 4: <i>How do I access a wheelchair?</i>• hoists – either powered or manual – to help transfer, such as from chair to bed• ramps and widened doorways to allow wheelchair access

<p><i>Getting upstairs or downstairs</i></p>	<ul style="list-style-type: none"> • stair lift – though these this may not be helpful if you need a wheelchair, as this requires two wheelchairs, one on each floor, and transferring between the chair and stairlift • handrails on both sides of the stairs • through floor lift to enable transfer up and down stairs, including a wheelchair if needed
<p>Difficulty</p>	<p>Examples of equipment or aids that may help</p>
<p><i>Feeling safe on your own</i></p>	<ul style="list-style-type: none"> • cordless or mobile phone close at hand to call for help • an alarm which automatically contacts emergency services or other people of your choice, should you need urgent help. These can be worn as a pendant around the neck or on the wrist • environmental controls to operate TV, lights, door entry etc
<p><i>Eating and drinking</i></p>	<ul style="list-style-type: none"> • adapted cutlery, crockery and cups to help with grip and control • arm supports to help keep your arms raised • head supports to keep your head and neck in a comfortable position • portable suction unit to help clear the mouth <p> For more information about swallowing see: Information sheet 7A – <i>Swallowing difficulties</i></p>
<p><i>Showering</i></p>	<ul style="list-style-type: none"> • non-slip mats for grip and safety • grab rails to help support balance • level access shower to make it easier to access the shower • wall-fixed seat, shower stool, wheeled shower chair to enable you to sit down in the shower

<p><i>Bathing</i></p>	<ul style="list-style-type: none"> • non-slip mats for grip and safety • grab rails to help support balance • bath boards or mechanical bath seat to make it easier to get in and out of the bath • hoist – either powered or manual to transfer in and out of the bath
<p><i>Using the toilet</i></p>	<ul style="list-style-type: none"> • a 'bottom wiper' with a long looped handle and paper grip or a powered washer/dryer toilet to support you to clean yourself after using the toilet • hoist, raised toilet seat and grab rails to make it easier to get on and off the toilet
<p>Difficulty</p>	<p>Examples of equipment or aids that may help</p>
<p><i>Getting dressed and grooming</i></p>	<ul style="list-style-type: none"> • leg lifters, sock aids and shoe horns can make getting dressed easier • button hooks and zip pullers to make managing clothing fastenings easier • long handled hairbrushes and hands free hairdryers to help you to groom yourself <p> For details about getting dressed clothes, see: Information sheet 11A - <i>Clothing</i></p>
<p><i>Mouth care</i></p>	<ul style="list-style-type: none"> • lightweight electric toothbrush, extra long handled toothbrush, three-sided toothbrush, easy-grip toothbrush if you have limited arm strength or movement • non-foaming toothpaste to help if you have swallowing difficulties and worry about choking on toothpaste • portable suction units to help clear the mouth of toothpaste and saliva <p> For details about caring for your mouth with MND, see: Information sheet 11B – <i>Mouth care</i></p>

<p><i>Bed</i></p>	<ul style="list-style-type: none"> • bed raisers or grab rails to make it easier to get into bed • slide sheets to help you transfer and make it easier for carers to move you in bed • powered adjustable bed to enable positioning, particularly if you have difficulties breathing and cannot lie flat
<p><i>Comfort</i></p>	<ul style="list-style-type: none"> • cushions to make chairs more comfortable and relieve pressure • riser recliner chairs to help you to sit down and stand up and improve your comfort • head supports to keep your head and neck in a comfortable position
<p>Difficulty</p>	<p>Examples of equipment or aids that may help</p>
<p><i>Communication</i></p>	<ul style="list-style-type: none"> • communication boards or books to enable you to point or signal to letters or words to create your message • eye-pointing frames to indicate a letter, word or symbol by directing your gaze at the appropriate section • voice amplifier to make your voice louder if it has become faint • voice output communication aids to store words or phrases electronically that can be played back • tablet with text-to-speech app <p> For more information about communication aids, see: Information sheet 7C – <i>Speech and communication support</i></p>
<p><i>Driving or being a passenger</i></p>	<ul style="list-style-type: none"> • leg lifters, hand holds, transfer boards, hoists and swivel cushions to make it easier to get in and out of the car • adapted car controls to help you continue driving if you find standard controls difficult to manage • wheelchair accessible vehicles to travel without transferring in and out of your wheelchair <p> For details about driving, travel and transport see: Information sheets 12A-D</p>

<i>Sex and intimacy</i>	<ul style="list-style-type: none"> • slings, harnesses and positioning pillows to support positioning and comfort • sexual aids for both men and women if tiredness or movement are an issue <p> For details about sex and relationships with MND, see: Information sheets 13A and 13B</p>
--------------------------------	---

3: Where do I get equipment from?

There are many ways of adapting everyday tasks to prolong independence, including the use of equipment and aids. Before buying equipment seek an assessment with an occupational therapist, as not all equipment is suitable for everyone. Mistakes can be costly and frustrating. An occupational therapist can also help you think about your future needs. As some items may take time to arrange, it is best to arrange them early.

The types of equipment you need will depend on how MND affects you. It may be helpful to ask other people with MND about equipment they use and find helpful. Our online forum provides a safe place for you to communicate openly with other people affected by MND. You can view the forum conversations without joining if you prefer. Visit the forum at: <http://forum.mndassociation.org>

Our branches and groups run informal support meetings for people living with MND and their carers. Contact MND Connect to find your local branch or group. See section 5: *How do I find out more?* for contact details.

Who can help me?

Physiotherapist: for guidance on managing symptoms such as fatigue, cramps and spasticity in muscles. They can also advise on appropriate exercises, passive or assisted exercise and positioning to maximise comfort. Physiotherapy and exercise cannot delay the progression of the disease, but may help to maximise the use of muscles that are not yet affected and increase flexibility by maintaining movement of your joints. They can advise on mobility aids, such as walking frames.

 For more information about physiotherapy for MND, see: Information sheet 6A - *Physiotherapy*

Speech and language therapist (SLT): for advice and assessment on speech and swallowing difficulties. An independent assessment with a speech and language therapist is recommended if you are considering purchasing any communication aids.

District or community nurse: for medical services, such as assistance with medication and monitoring symptoms. They can support you to get nursing equipment at home such as a hospital bed, pressure relieving mattresses and commodes.

Dietitian: works closely with your speech and language therapist to advise on the most appropriate diet to help you maintain a healthy weight and offer advice on nutrition where swallowing may be difficult.

Occupational therapist (also referred to as an OT): for advice on posture and equipment, to help you continue daily routines with as much independence as possible. They can advise how to maintain independence in all aspects of self-care and daily living. In terms of equipment and aids, they are usually the main professional contact. Ask a member of your health and social care team for a referral. Occupational therapists can also:

- provide guidance on falls prevention
- recommend how to maintain posture, minimise pain and reduce discomfort
- advise about adapting your home environment for wheelchair accessibility or for equipment to help you with mobility or tasks
- provide advice to you and your carer on moving and handling
- suggest ways to budget your energy to help manage fatigue
- provide guidance on how to maintain social activity and personal hobbies or interests
- advise you about using equipment to control your environment
- support the psychological and emotional impact of MND and using new equipment.

Will I need to pay for any equipment supplied?

If you are assessed by an occupational therapist who agrees you need equipment, it is usually loaned to you free of charge. However, your local authority or health and social care trust in Northern Ireland may charge for certain pieces of equipment.

If a district or community nurse provides home nursing equipment, this is usually free of charge, but larger items may be provided on loan, such as a powered bed.

Check with the service providing the equipment whether they will pay for any servicing the equipment may need. If the equipment was provided following an assessment, this will usually be the case.

For larger adaptations or installations, a Disabled Facilities Grant (DFG) may be available from your local authority or, in Northern Ireland, your local health and social care trust, if you qualify. You may still need to contribute towards the costs. Some people choose to fund the work themselves or seek funding from charities, which may help to get the work completed more quickly.

It is important to try and think ahead, rather than waiting until you need the adaptation, as a grant can take a long time to be agreed.

 For more information about Disabled Facilities Grants, see:
Information sheet 10C - *Disabled Facilities Grants*

Always seek assessment from an occupational therapist first to ensure any adaptation will suit your needs. Your local authority can usually advise on how to check if a building contractor is reputable and has appropriate certifications.

Can the MND Association help?

The MND Association may be able to help you access the equipment you need if you are unable to get it from your local adult social care services or the NHS.

Equipment loan

Our Support Services team are able to provide a limited range of equipment that can be borrowed where statutory funding is not available or is not timely.

This includes:

- riser recliner armchairs
- communication aids
- portable suction units.

Requests for equipment loan need to be made by a relevant health or social care professional.

MND support grants

We offer various types of support grant to help you and those close to you:

Care grants: We offer care grants that may be able to help you fund equipment if it is not available from adult social care services or the NHS, or if there are excessive delays in accessing the equipment. You will need to have been assessed by a health and social care professional.

Quality of life grant: This grant can be used for things that improve your quality of life such as household repairs, a holiday, complementary therapies etc.

Carers grant: This grant is specifically to help carers take a break, such as respite, gym membership etc.

Young person's grant: This grant is for those aged 18 and under who are directly affected by MND. It can support people to fund things that they may miss out on due to the impact of MND on their family, such as driving lessons and club memberships. If you would like further information about our support grants or would like to discuss an application, contact the Support Services team on 01604 611802, or email: support.services@mndassociation.org

What if I need to source equipment for myself?

You can source products through specialist suppliers, mail order, the internet or various general stores. It is still worth having an assessment with an occupational therapist before purchasing any items to ensure they meet your needs.

Some key things to consider when purchasing equipment:

- Can you get spare parts easily if needed?
- Does it need to be serviced?
- Can it be returned if you are not happy with it?
- Does it come with a warranty?
- Would hiring the equipment be a better option?
- Will it meet my needs in the future, as my symptoms progress?

You may be able to get VAT exemption on products designed for people with disabilities if you qualify. The supplier should sell you the goods or services with the VAT already discounted, so discuss this in advance.

What if I need equipment to be able to continue working?

The Access to Work scheme helps employers get grants to provide equipment, adaptations or support to enable employees with disabilities to do their work. For England and Wales, contact Access to Work to apply. For Northern Ireland, contact your local job centre or social security office. See *Useful organisations* in section 5: *How do I find out more?* for contact details.

 For more information about support to help you continue working, see: Information sheet 10E – *Work and MND*

4: How do I access a wheelchair?

MND can cause, among other symptoms, muscle wasting and fatigue. This can lead to mobility problems, including difficulty walking. Initially, equipment such as walking sticks and frames can help, however you may need to consider a wheelchair as your symptoms progress.

The thought of using a wheelchair may feel daunting. Discuss any concerns about using a wheelchair with your occupational therapist or wheelchair service, as they are experienced in supporting people to adjust to new equipment and can answer any questions.

Using a wheelchair can improve your quality of life by helping you to:

- maintain your mobility and independence
- continue community and social activities
- preserve your energy
- avoid falls.

“My wheelchair has really changed my life.”

Local wheelchair services are provided by the NHS or health and social care trust in Northern Ireland. A member of your health and social care team can refer you to your local service.

You will have an assessment to determine whether you need a wheelchair and which type would be most suitable for you. Getting a wheelchair provided can be a lengthy process. You should ask for a referral to wheelchair services as early as possible if you are having mobility problems.

What types of wheelchair are there?

Manual wheelchairs

There are two main types of manual wheelchair:

A standard wheelchair: These can be useful and convenient if you are starting to need help with your mobility. This type of chair is generally easy to use and can be folded up to transport in a car boot.

A highly supportive manual wheelchair: These are most often used if you need more support with your posture than can be offered by a standard wheelchair. These are larger than standard wheelchairs and may not fit into a car boot.

Tilt-in-space is a mechanism that will tilt the whole seat and back backwards. This is helpful if you have weakness in your trunk, shoulders and neck, as it can help prevent you sliding down the wheelchair, and can also relieve the effects of fatigue.

Powered wheelchairs

These wheelchairs offer more independence if you are unable to self-propel a manual wheelchair. They are usually driven using a hand-operated joystick controller but a wheelchair therapist or rehabilitation engineer will assess you for the most suitable control system. A powered wheelchair may also include a powered tilt-in-space mechanism.

There are many different types of powered wheelchairs, which may be for indoor or outdoor use only. Some can be used both indoors and outdoors. The NHS will only provide wheelchairs that can be used either indoors only, or indoors and outdoors.

It is not advisable to lift a powered wheelchair into a car due to the weight of the wheelchair, but a boot hoist might be an option if an existing car is big enough. A wheelchair accessible vehicle (WAV) is an alternative option, especially if transferring is difficult.

 For more information about suitable vehicles with MND, see:
Information sheet 12B – *Choosing the right vehicle*

If you are travelling by air, powered wheelchairs can be taken on a plane. However, airlines may require them to be immobilised while flying. An 'airsafe' plug can be purchased to inhibit powered wheelchairs on flights. This device is compatible with most powered wheelchairs. It plugs into the charging socket to immobilise the chair. This can prevent costly damage to wheelchairs, such as wires being cut or disassembly of the chair to remove the battery. Search for *airsafe wheelchair plug* online to purchase, as may be available from various suppliers.

 For more information on travelling with MND, see:
Information sheet 12C – *Travel and transport*

Powered Neuro Wheelchair

The MND Association has worked with three wheelchair manufacturers to create four models of Powered Neuro Wheelchair. These wheelchairs are specifically designed to meet the needs of people with MND and other similar conditions.

Each of the Powered Neuro Wheelchairs is suitable for indoor and outdoor use and has features that can adapt as your needs change.

Each wheelchair has been designed to be affordable by local wheelchair services, so it is worth discussing this option during your assessment. Features of the Powered Neuro Wheelchair include:

- powered tilt-in-space, to help prevent slumping or sliding
- a cushioned, adjustable backrest
- a seat board that can be supplied with the most appropriate cushion
- different headrest options
- padded arm rests
- options for adding different controls and switches
- independent angle-adjustable foot rests.

How will I be assessed for a wheelchair?

In England, assessments are offered by the NHS through its wheelchair services. In Northern Ireland, assessments are carried out through the Department of Health, Social Services and Public Safety (DHSSPS) Wheelchair Service. Across Wales, assessments are offered by the Artificial Limb and Appliance Service via three Artificial Limb and Appliance Centres.

An assessment will consider:

- your posture and mobility
- your living environment and local surroundings
- how the wheelchair is to be transported
- your family and carers needs
- the activities you wish to do
- your skill level, particularly with safe control of a powered wheelchair
- relieving pressure and also prevention of pressure sores
- how your needs may change in future.

The assessment may include an eye test for a powered wheelchair, although not every wheelchair service will require this.

Will I need to fund the wheelchair?

Once you have been assessed, the wheelchair service will advise as to what wheelchair they will be able to provide to you on loan. This is free of charge. They will also have responsibility for the costs of servicing, maintenance and repairs.

Most wheelchair services offer a voucher scheme to help fund an alternative wheelchair to what they can provide if you require additional features. Most services provide vouchers for manual wheelchairs, but do not always provide them for powered wheelchairs. You should still be properly assessed for any wheelchair bought using a voucher to ensure it is suitable for your needs. There are different types of voucher, and some types will mean you are responsible for repair costs, so ask about this before accepting the vouchers.

If you choose to purchase a wheelchair privately, you should still have your needs properly assessed by a relevant professional. You can request a copy of your assessment and use this to help you choose an appropriate wheelchair. Purchasing a wheelchair privately without an assessment can lead to costly mistakes and a chair that may not meet your needs.

What happens when the wheelchair arrives?

This will depend on the type of wheelchair you are getting and how services work in your area. Your wheelchair may be issued from the stock available at the wheelchair service. Alternatively, it may need to be ordered from a supplier, which can take longer.

Once it arrives, your wheelchair will be adjusted to suit you and then you will be shown how to use it. For powered wheelchairs, you will be given opportunity to practice using it to ensure your safety. You should also be given advice about insurance.

Waiting times will depend on whether your chair is a standard order or made to measure. The Powered Neuro Wheelchairs have been designed to come as standard order chairs that are adjusted to your needs on arrival, so the wait is reduced.

How do I maintain and repair my wheelchair?

The wheelchair service should tell you who to contact if there is a problem with your wheelchair. Most often, this will be an external service provider. Any wheelchair provided by a local wheelchair service will be serviced and maintained by the service. This may not be the case where certain types of vouchers have been used, so ensure that you ask.

What if my needs change?

If the wheelchair no longer meets your needs, contact the wheelchair service for a reassessment. This may include a change, for example, from a manual to a powered wheelchair. Ensuring that your wheelchair and any other aids meet your changing needs can help to improve your quality of life and prolong your independence. Ask professionals involved in your care if an item is no longer helpful, as alternatives may be available.

How can the MND Association Wheelchair Service help me?

The MND Association's Wheelchair Service consists of MND specialist wheelchair therapists and a wheelchair co-ordinator.

The therapists link into MND care centres and networks, and NHS or other wheelchair services. They provide posture and mobility assessments to determine people's wheelchair needs. They also support other wheelchair services through education and training, and joint assessments.

The co-ordinator develops links with external wheelchair services and helps progress reported problems with delays, service or provision. The co-ordinator also processes applications for support grants to fund wheelchair top-ups for non-standard features or additional equipment. For further information, contact: wheelchairs@mndassociation.org

5: How do I find out more?

Useful organisations

We do not necessarily endorse any of the following organisations, but have included them to help you begin your search for further information. The contact details are correct at the time of print, but may change between revisions. If you need help to find an organisation or have any questions, contact our MND Connect helpline (see *Further information* at the end of this sheet for details).

Adult social care services (sometimes called social services)

For adult social care contact your local authority through your area telephone directory, or search for local authorities at GOV.UK

Website: www.gov.uk
www.nidirect.gov.uk (for Northern Ireland)

The College of Occupational Therapists

Sets the professional standards for occupational therapists. You can search for a registered occupational therapist.

Telephone: 020 7357 6480
Email: through the website contact page
Website: www.cot.co.uk

Disabled Living Foundation

Provide impartial advice, information and training on independent living.

Address: 4th Floor, Jessica House, Red Lion Square, 191 Wandsworth High Street,
London SW18 4LS
Telephone: 0300 999 0004
Email: info@dlf.org.uk
Website: www.dlf.org.uk

GOV.UK

Online government advice on a variety of welfare topics, including support for people with disabilities.

Email: email addresses are provided on the website, related to each enquiry
Website: www.gov.uk
www.nidirect.gov.uk (Northern Ireland)

Health in Wales

Information on NHS services in Wales, including a directory of the Welsh health boards.

Email: through the website contact page.
