

Motor neurone disease kills a third of people within a year and more than half within two years of diagnosis.

MND is a fatal, rapidly progressing disease that affects the brain and spinal cord.

MND attacks the nerves that control movement so muscles no longer work. It **does not usually affect the senses** such as sight, sound, feeling etc.

Around **35%** experience mild cognitive change causing difficulties with planning, decision-making and language.

A further **15%** of people show signs of a form of dementia resulting in more pronounced behavioural change.

MND can leave people locked in a failing body, **unable to move, talk, swallow and eventually breathe.**

MND affects people **from all communities.**

A person's lifetime risk of developing MND is up to 1 in 300. That's one person in an average size cinema screen.

It affects up to **5,000 adults** in the UK at any one time.

Six people are diagnosed every day. Up to 5,000 people are fighting MND at various stages of the disease. **Six people die each and every day.**

MND - there is no cure.

We are the only national charity in England, Wales and Northern Ireland focused on MND care, research and campaigning.

Should you need any information or support please contact our MND Connect helpline.
